Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 1-19, 29-35, 42-51, and 56-62, drawn to an optical wavelength-converting optical system and method, classified in class 359, subclass 326.
- II. Claims 20-28, 36-41, and 52-55, drawn to an optical demultiplexing system and method, classified in class 398, subclass 79.

The inventions are distinct, each from the other because:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and functions, in that the invention of Group I functions to actually shift wavelengths of the light traveling therein, whereas the invention of Group II does not shift wavelengths, but rather separates distinct wavelengths of light which are already present.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR § 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 2874

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR § 1.48(b) and by the fee required under 37 CFR § 1.17(i).
